

We are specialized in complex technological processes (including design, build, supervision, operation or up for sale) required to treat OIL SLUDGE from:

Three-Phase Centrifuge Process Overview in Pictures

Homogenization of the material before extraction

Special designed equipment for homogenization and extraction of the oil sludge

Pre-treatment special equipment

Depending on the criteria and requirements of the Client, but also on the imposed legislation, we adapt our own technologies and equipment specifically for each project.

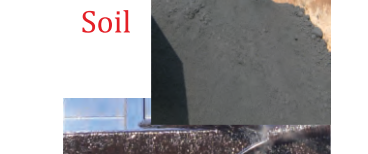

Heating and Conditioning

Vertical separation modules to increase quality of recovered oil

Resulted fractions after separation

Water content and sediment in recovered oil up to <1%

Automatic Polymer Dosing Station
